

Club Examples

Every club is different (in location, interest and size), which makes it a very unique program with very unique needs, contributors and outcomes. Here are some examples of how Clubs might choose to align to the proposed narrative we want to move toward in 2017:

IoT

- In the midwest, an after school middle school club focuses on learning **circuits** using Makey Makey and Arduino in a computer lab using desktop computers with good internet connection

Gender

- In Gambia, the founder of an all women tech organization trains mentors to lead digital literacy clubs for **young women** in order to grow leaders in her community and provide youth an opportunity to acquire digital skills.

Location (library, campus, community center, etc.)

- In Chennai india, a group of students produce and adapt content and teach web literacy skills to youth (under 18) living in **orphanages**, meeting sporadically and working with a single computer and projector, low bandwidth

Learning

- In Philippines 3 college students start a Club that will teach teenagers web literacy skills in rural areas around their college. They use resources and curriculum from Learning.mozilla.org to develop a curriculum and plan for the Club.
