Mozilla Clubs Info Sheet

A Mozilla Club brings people together locally to teach, protect and build the open web in an engaging and collaborative way. All clubs include:

- **Interested-based, peer-supported learning.** Club gatherings are hands-on, production-centered and social. Research shows learners are most engaged when they are working on projects they care about, and are with peers who support and encourage them.
- **Curriculum that's free, open and educator-tested.** We offer a collection of resources and teaching activities that are free, open and remixable. Each is grounded in the Web Literacy Map and includes step-by-step instructions and tips for facilitation.
- **Best practices and community mentorship.** Club participants have access to best practices and mentorship from Mozilla community members around the world through our newsletters, community calls, public forums and growing list of resources.
- **Regular engagement.** Through regular meetings, club participants deepen their learning while contributing to Mozilla's global outreach and Web Literacy work.
